

DEPARTMENT OF RADIOLOGY & IMAGING

PATIENT ID: P001

PATIENT NAME: Rahul

EXAMINATION: CHEST X-RAY (POSTEROANTERIOR VIEW)

DATE OF EXAMINATION: 2026-08-31

REFERRING PHYSICIAN: Dr. Arun

CLINICAL INDICATION:

45-year-old male presenting with persistent productive cough, fever of 38.2 C, and pleuritic right-sided chest pain.

FINDINGS:

1. LUNGS: There is a prominent airspace consolidation with patchy opacity noted in the right lower lobe. A small amount of pleural effusion is also visible on the right side.
2. The left lung field is clear without focal consolidation, pneumothorax, or vascular congestion.
3. PLEURAL SPACES: Minimal right-sided blunting of the costophrenic angle suggesting trace reactive pleural effusion.
4. CARDIAC & MEDIASTINUM: Cardiothoracic ratio is within normal limits. Mediastinal contours and hila are unremarkable.
5. OSSEOUS STRUCTURES: Bony thorax appears intact with no acute fractures.

IMPRESSION / KEY FINDINGS:

Right lower lobe acute alveolar pneumonia with minimal reactive pleural effusion.

RECOMMENDATION: Clinical correlation and empirical antibiotic therapy as per hospital pneumonia guidelines.
